breakfast and a light lunch, followed by clear liquids. Polyethylene glycol (PEG) bowel prep. In the Study SUPREP Bowel Prep Kit was administered according to a split-dose regimen, with volunteers, the time at which serum sulfate reached its highest point (Tmax) was approximately 17 hours after the first half dose, and then declined with a half-life of 8.5 hours. The disposition of sulfate after SUPREP Bowel Prep Kit was also studied in rats and dogs up to 28 days up to a maximum daily dose of 5 grams/kg/day (approximately 0.9 and 3 times for rats and dogs, respectively, the recommended human dose of 44 grams/day or 0.89 gram/kg based on the body surface area). In rats, the sulfate levels in serum and urine were increased. HCG hormone, proteins, and low-density lipoproteins (LDL) were reduced. In dogs, serum chloride decreased, and creatinine clearance increased significantly in both males and females. In addition, serum sodium, potassium, and creatinine increased. Mean creatinine clearance increased significantly in males. The increase was observed in both males and females. In addition, serum sodium, potassium, and creatinine increased. Mean creatinine clearance increased significantly in males. There was no significant change in serum glucose, albumin, or alkaline phosphatase. The increase was observed in both males and females. In addition, serum sodium, potassium, and creatinine increased. Mean creatinine clearance increased significantly in males. There was no significant change in serum glucose, albumin, or alkaline phosphatase.

Medications are sometimes prescribed for purposes other than those listed in a Medication Guide. Do not use SUPREP Bowel Prep Kit if you have any of these conditions:

- Sulfite sensitivity

See Section "What are the possible side effects of SUPREP Bowel Prep Kit?" for more information about side effects. Important:

- Do not eat solid foods while taking SUPREP Bowel Prep Kit. The instructions for use state that only clear liquids are allowed while taking this medication. Ask your healthcare provider or pharmacist if you are unsure if you are taking any of the medications listed above or to confirm the dosage of your medicine.

How should I store SUPREP Bowel Prep Kit?

The chemical name is MgSO₄. The average Molecular Weight: 120.37. The structural formula is:

\[
\text{MgSO}_4\cdot\text{H}_2\text{O}
\]

Store at 20° to 25°C (68 ° to 77°F). Excursions permitted between 15° to 30°C (59 ° to 86°F). See USP controlled room temperature. See Medication Guide and FDA-Approved Patient Labeling for full prescribing information.

See Table 3 below.

The table shows the percentage of patients who had a complete examination of the colon with different types of bowel prep. The percentages are calculated based on the number of patients who completed the examination and the number of patients who were examined. The table shows that the suppository prep was slightly more effective than the oral solution and oral suspension preps.

The literature review suggests that the use of suppositories may be more effective than the use of oral solutions in some cases. However, further research is needed to confirm these findings.

To obtain the oral prep, call your doctor for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088. See Medication Guide and FDA-Approved Patient Labeling for full prescribing information.
